

PRESS RELEASE

Sierra Introduces New Full-line Catalog for Scientific Gas Flow Meters and Controllers

June 18, 2026 – Monterey, California – [Sierra Instruments](https://www.sierrainstruments.com), a global leader in precision flow measurement for over 50 years, announces the release of its new full-line catalog and selection guide for scientific gas flow meters and controllers, a comprehensive resource designed to help engineers, scientists, and OEM integrators quickly identify and specify the ideal technology to measure and control their applications.

Sierra's Scientific Catalog and Guide features a full range of gas flow meters and controllers for clean, corrosive, and toxic gases, as well as high-purity environments. The guide makes it easy to compare technologies, evaluate key performance characteristics such as accuracy, repeatability, and turndown, and select the ideal instrument for each process or experiment.

The new guide is the scientific counterpart to Sierra's [Industrial Flow Measurement Catalog and Guide](https://www.sierrainstruments.com/userfiles/file/industrial-flow-measurement-catalog-and-guide.pdf). While the scientific guide focuses exclusively on gas flow meters and controllers for laboratory, OEM, and high-purity applications, the industrial guide addresses gas, liquid, and steam applications, spotlighting Sierra's thermal, vortex, and ultrasonic technologies. This distinction ensures customers can quickly choose the most suitable instrument for their specific needs. Together, the two guides help customers find the right Sierra solution for their application.

Sierra's new Scientific Catalog and Guide is available now. View and download it here: <https://www.sierrainstruments.com/userfiles/file/scientific-full-line-catalog.pdf>.

Sierra. Measurably Different.™

For over 50 years, Sierra has been a global pioneer in the design and manufacturing of flow instruments you can trust. We provide accurate and efficient solutions that control industrial processes, regulate oil and gas to minimize greenhouse gases, convert waste to energy, deliver life-saving medicine, and create silicon chips that enable advanced technology. With over 150 locations in over 50 countries, Sierra provides innovative products and services where and when needed. Visit [sierrainstruments.com](https://www.sierrainstruments.com).
