

Sierra to Unveil New Wastewater Flow Measurement Solution at WEFTEC 2026

August 25, 2026 – Monterey, California – [Sierra Instruments](#) announces it will unveil a new product offering designed to support the evolving measurement needs of wastewater treatment facilities at WEFTEC, the Water Environment Federation's Technical Exhibition and Conference, September 26–30 in New Orleans, Louisiana.

Visit Sierra at Booth 1106 to be among the first to see the new offering and discuss your wastewater flow measurement applications with Sierra's experts.

For wastewater treatment operators, accurate flow measurement is essential to managing energy use, process performance, emissions, and regulatory requirements. Sierra's thermal mass flow measurement solutions help wastewater facilities monitor and control critical gas-flow applications throughout their processes.

"Wastewater treatment has long been an important market for Sierra, and we continue to invest in solutions that help facilities operate more efficiently and confidently," said Greg Smith, Product Line Manager for Sierra Instruments. "WEFTEC gives us an opportunity to introduce what's next while speaking directly with the engineers and operators who rely on dependable measurement for essential treatment and resource-recovery processes."

Sierra's team will be available throughout WEFTEC to discuss attendees' application requirements, installation challenges, upgrades to existing measurement points, and flow measurement strategies for:

- Aeration and blower-air measurement
- Digester gas and biogas monitoring
- Methane measurement
- Cogeneration and waste-to-energy systems
- Flow measurement installations with limited straight-run or other field constraints

Sierra's BioTrak™ thermal mass flow meter provides accurate measurement for air, methane, biogas, and digester gas applications. Available in insertion, inline, and remote configurations, BioTrak offers flexible options for wastewater facilities seeking dependable performance across a range of process conditions.

Visitors are encouraged to stop by **Booth 1106** to preview Sierra's newest wastewater-focused offering and consult with flow measurement specialists about opportunities to improve visibility, control, and efficiency across their operations.

Sierra. Measurably Different.™

For over 50 years, Sierra has been a global pioneer in the design and manufacturing of precise flow measurement instruments you can trust. We produce accurate and reliable solutions that control industrial processes, regulate emissions for oil and gas operations, convert waste to energy, create silicon chips that enable advanced technology, and deliver life-saving medicine. Representatives in 150 locations in over 50 countries provide innovative flow measurement products and services where and when needed.
